Chapter 10: Understanding Elementary Shapes (N.E)

Topic: Line segment: A line segment is part of the line that connects two points.

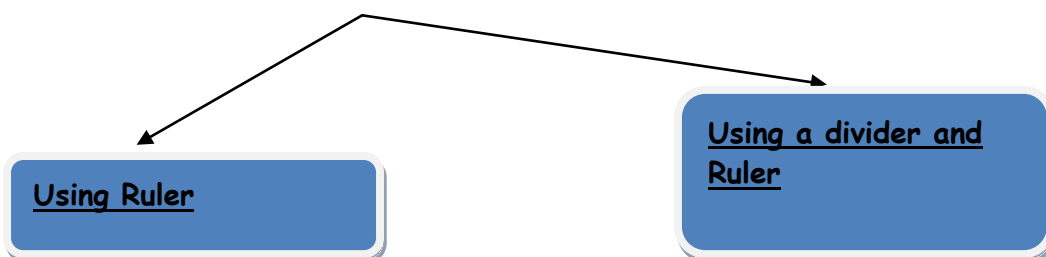

Line Segment

Comparison of line segments:

Measuring line segments :

Some Important Points:

1. Line segments having same length are said to be congruent.
2. Measuring a line segment using a ruler and divider is the most convenient method.
3. Comparison by observation is the least accurate method to compare line segments.

(Write down the above given concepts on your interleaf notebook)
